

The Kentucky INBRE will again offer an intensive workshop on the development of National Institutes of Health (NIH) R15-Research Enhancement Award proposals. R15-REA grants are specifically designed to support research projects (three years - \$300,000) in the biomedical and behavioral sciences conducted by faculty and students in colleges/universities and health professional schools that have not received more than \$6 million in NIH research grants in four of the last seven fiscal years. Thus, faculty at nearly all colleges/universities in Kentucky are eligible.

The three main goals of the R15-REA program are: (1) to support meritorious research; (2) to strengthen the research environment of the institution; and (3) to expose students to research.

The workshop will be led by faculty and professional proposal development staff at Kentucky institutions that have been successful in competing for R15-REA grants.

Past attendees at this workshop have been successful in obtaining NIH funding and ***this workshop is required to be eligible for KY INBRE research grants.***

The workshop will be conducted via Zoom and is free and open to interested faculty at all Kentucky public and private institutions.

See our website for more information and registration from. **Please register online by Monday, October 11.**
